

A review of literature on wind resistance of photovoltaic panels

Overview

This paper reviews research on wind load characteristics, dynamic response, wind-resistance improvement strategies, and construction and monitoring technologies.

How do I leave a review

Here are the steps on how to leave a review on Google: Go to the Google Maps page for the business you want to review. Click the "Write a Review" button. Select a rating from 1 to 5 stars.

[Wind Load and Vibration Response of Photovoltaic Panel Supports: a](#)

Wind load produces vibrations of PV panels, which is one of the main factors for their failure. In this study, the wind-induced vibration response of the PV panel supports was analyzed.

[A Review on Wind Effects and Wind Resistance Performance](#)

This paper reviews research on wind load characteristics, dynamic response, wind-resistance improvement strategies, and construction and monitoring technologies.

[Wind Load and Wind-Induced Vibration of Photovoltaic Supports: A](#)

PV supports, which support PV power generation systems, are extremely vulnerable to wind loads. For sustainable development, corresponding wind load research should be carried out on

[Wind induced structural response analysis of](#)

The wind-induced vibration characteristics of the photovoltaic support system are investigated from a time-domain analysis perspective,

Numerical study on the sensitivity of photovoltaic panels to wind load

In this work, the effects of wind loads on six PV array structure configurations installed on offshore floating PV platforms at high Reynolds numbers are investigated by using the computational

[Experimental study on wind load characteristics of](#)

Wind load is a critical factor that threatens the structural safety of rooftop PV systems. Experimental tests in a wind tunnel investigated the impact
