

How far is the U-shaped hook of the photovoltaic panel

Overview

Typically, the recommended spacing for the solar panel roof hook ranges from 4 to 6 feet (1. This spacing allows for sufficient support and load distribution across the roof.

For a panel that is 80 inches long, you would place one rail 20 inches from the top edge and the other 20 inches from the bottom edge. This leaves a 40-inch span between the rails,

[Two types of installation for solar hooks](#)

For spacious roofs: Prioritize horizontal hooks- they simplify installation and distribute force evenly. For tight spaces: Vertical hooks optimize space utilization despite complex conditions.

Solar PV Mounting Systems

This gap is roughly 500mm between the rear of one panel and front of another. Once in place, the ballast is then placed on the frame underneath the panels to hold it securely in place.

You must leave a 5mm gap between the hook arm and the tile surface below it. If the hook rests on the tile, the load transfers to the ceramic, causing it to shatter.
