What does `[:-1]` mean/do in python?

Working on a python assignment and was curious as to what `[:-1]` means in the context of the following code: `instructions = f.readline()[:-1]`
Have searched on here on S.O. and on Google but

Meaning of `list[-1]` in Python

I have a piece of code here that is supposed to return the least common element in a list of elements, ordered by commonality: `def getSingle(arr): from collections import Counter c = Counter`

[What is the difference between list and list \[1:\] in Python?](#)

By using a `:` colon in the list index, you are asking for a slice, which is always another list. In Python you can assign values to both an individual item in a list, and to a slice of the list.

CursedAI

Transform ordinary photos into cursed, viral-worthy creations

[What is the difference between list and list \[:\] in python?](#)

When reading, list is a reference to the original list, and `list[:]` shallow-copies the list. When assigning, list (re)binds the name and `list[:]` slice-assigns, replacing what was previously in the list.
