Create new column based on values from other columns / apply a

For the examples below - in order to show multiple types of rules for the new column - we will assume a DataFrame with columns 'red', 'green' and 'blue', containing floating-point values ranging 0 to 1.

60W Solar Street Lamp for Sale , Factory Price

Wide power range: 30W~120W. Solar panel + led chip + charge controller + battery all in one box.

Difference between 'new operator' and 'operator new'?

A new expression is the whole phrase that begins with new. So what do you call just the "new" part of it? If it's wrong to call that the new operator, then we should not call "sizeof" the sizeof

What is the 'new' keyword in

JavaScript?

The new keyword in JavaScript can be quite confusing when it is first encountered, as people tend to think that JavaScript is not an object-oriented programming language. What is it? What problems

When to use "new" and when not to, in C++?

You should use new when you wish an object to remain in existence until you delete it. If you do not use new then the object will be destroyed when it goes out of scope.
