

Purity of silicon the raw material for photovoltaic panels

Overview

The purity of silicon is often described by the "nines" classification system, which refers to the number of nines in the percentage purity. For example, "6N" silicon means it is 99.9999% pure.

[How Polysilicon Is Made for Solar and Electronics](#)

Polycrystalline silicon, often shortened to polysilicon, is a highly purified form of silicon that serves as the base material for most modern electronic and photovoltaic devices.

What does purity mean?

Purity is the state or quality of being uncontaminated, unmixed, unadulterated or undiluted. It denotes the level of cleanliness, clearness or absence of impurities, pollutants, or foreign substances.

[What you need to know about polysilicon and its role in solar modules](#)

Polycrystalline silicon is produced by melting high-purity silicon in a crucible and then slowly cooling it to form solid ingots. These ingots are then sliced into thin wafers, which are used as
