

There are several types of photovoltaic double pile fixed brackets

Overview

At present, there are 3 types of brackets used in most PV power plants: fixed conventional bracket, adjustable tracking bracket and flexible PV bracket. This refers to the mounting system where the orientation, angle, etc.

First, there are many fixing methods, such as pile foundation method (direct burial method), concrete block weight method, pre-embedded method, ground anchor method, etc.

Bolt-fixed bracket: The bracket is fixed to the foundation by bolts. Ballasted bracket: The bracket is fixed to the foundation by ballast (such as stones, concrete blocks, etc.).

When the installation site is too hard or there are too many crushed stones, the screw ground pile can be driven into the ground first, and then fix the column on the screw pile.
